

## TAIL Trimmer

The KEYSTONE Tail Trimmer is an enhanced version of the original machine still in use in many binderies that **cuts overhanging stock from the edge of signatures.**

This machine has been completely redesigned with *safety, ease of use and maintenance* in mind.

The clamp operates on a dual pressure system. When a pile is placed under the clamp, a foot pedal is pressed to clamp at low pressure – holding the product secure. When the two-handed safety start buttons are pressed, the clamp pressure increases until a pressure switch is made and the knife cycles.

The trimmings are directed to a container placed underneath. A safety switch interlocking guard is provided for cleanout. The backstop is adjustable as the knife wears.

*Tail Trimmer details*

## **FEATURES:**

- 5" long knife
- 2" max pile height
- 2 hand safety circuit
- Dual pressure clamp system
- 0.5 second cut time
- Trimming collection container
- Interlocked clean-out guard
- Plated wear surfaces
- Welded steel construction
- Tool kit provided
- Operation and parts book provided
